

Baffle update

Zhiwen Zhao

2013/08/29

What's compared

They are all in current CLEO field

- “CLEO baffle 4cm” current baffle
- “BaBar baffle” from Eugene
- “BaBar baffle more” by Rakitha, based on “BaBar baffle” and add 5 planes to be 11 total
- “BaBar baffle more1” by Zhiwen, based on “BaBar baffle more”, add 1 more degree in phi for each blocks

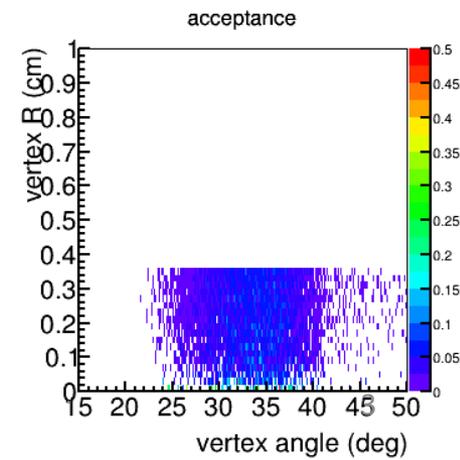

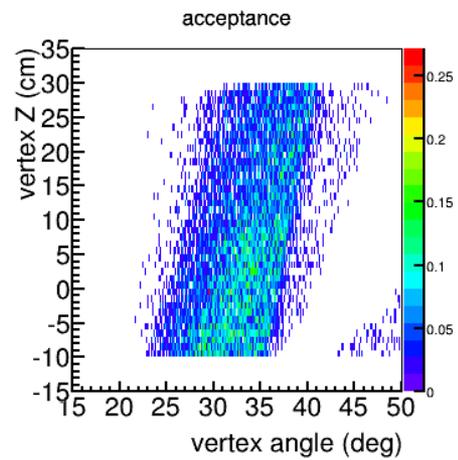

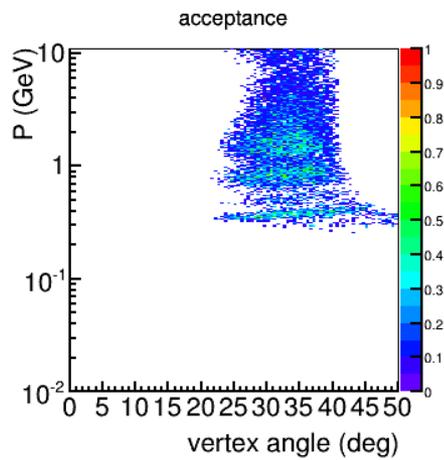

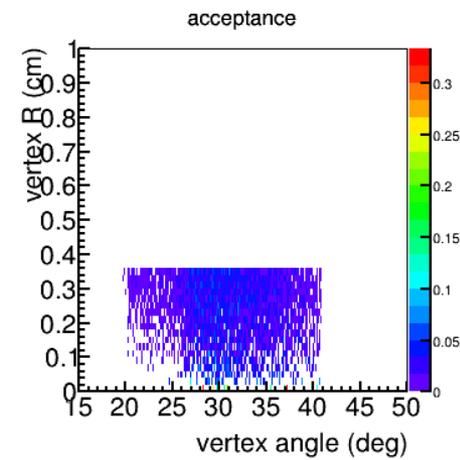

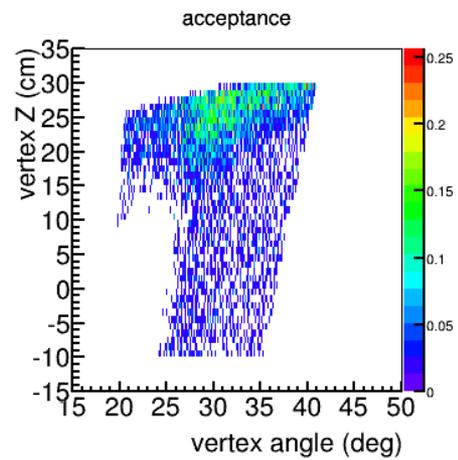

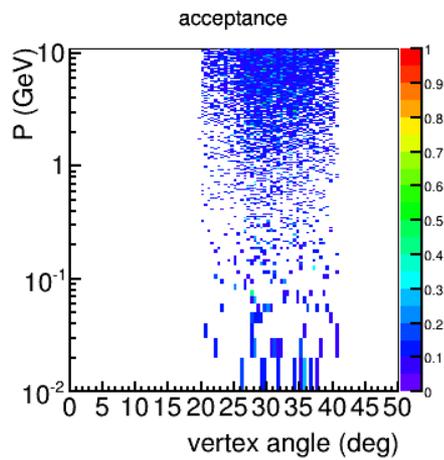

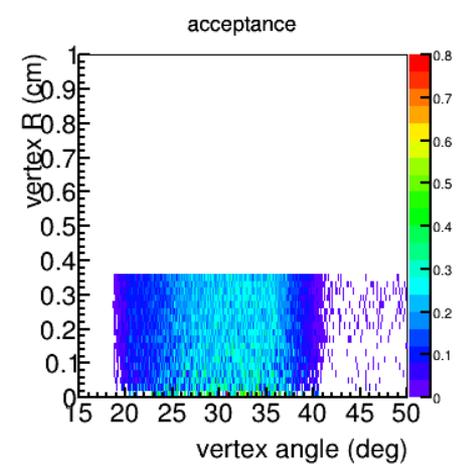

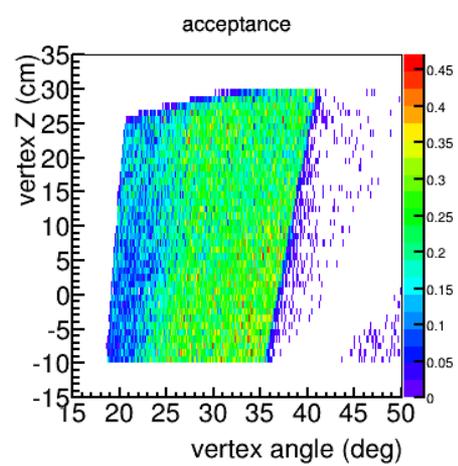

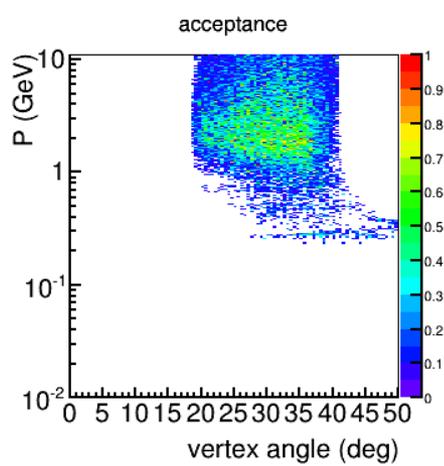

Acceptance,
CLEO baffle 4cm

negative

source
Z(-10,30)cm
R(0,3.536)mm
for 5x5mm raster

neutral

positive

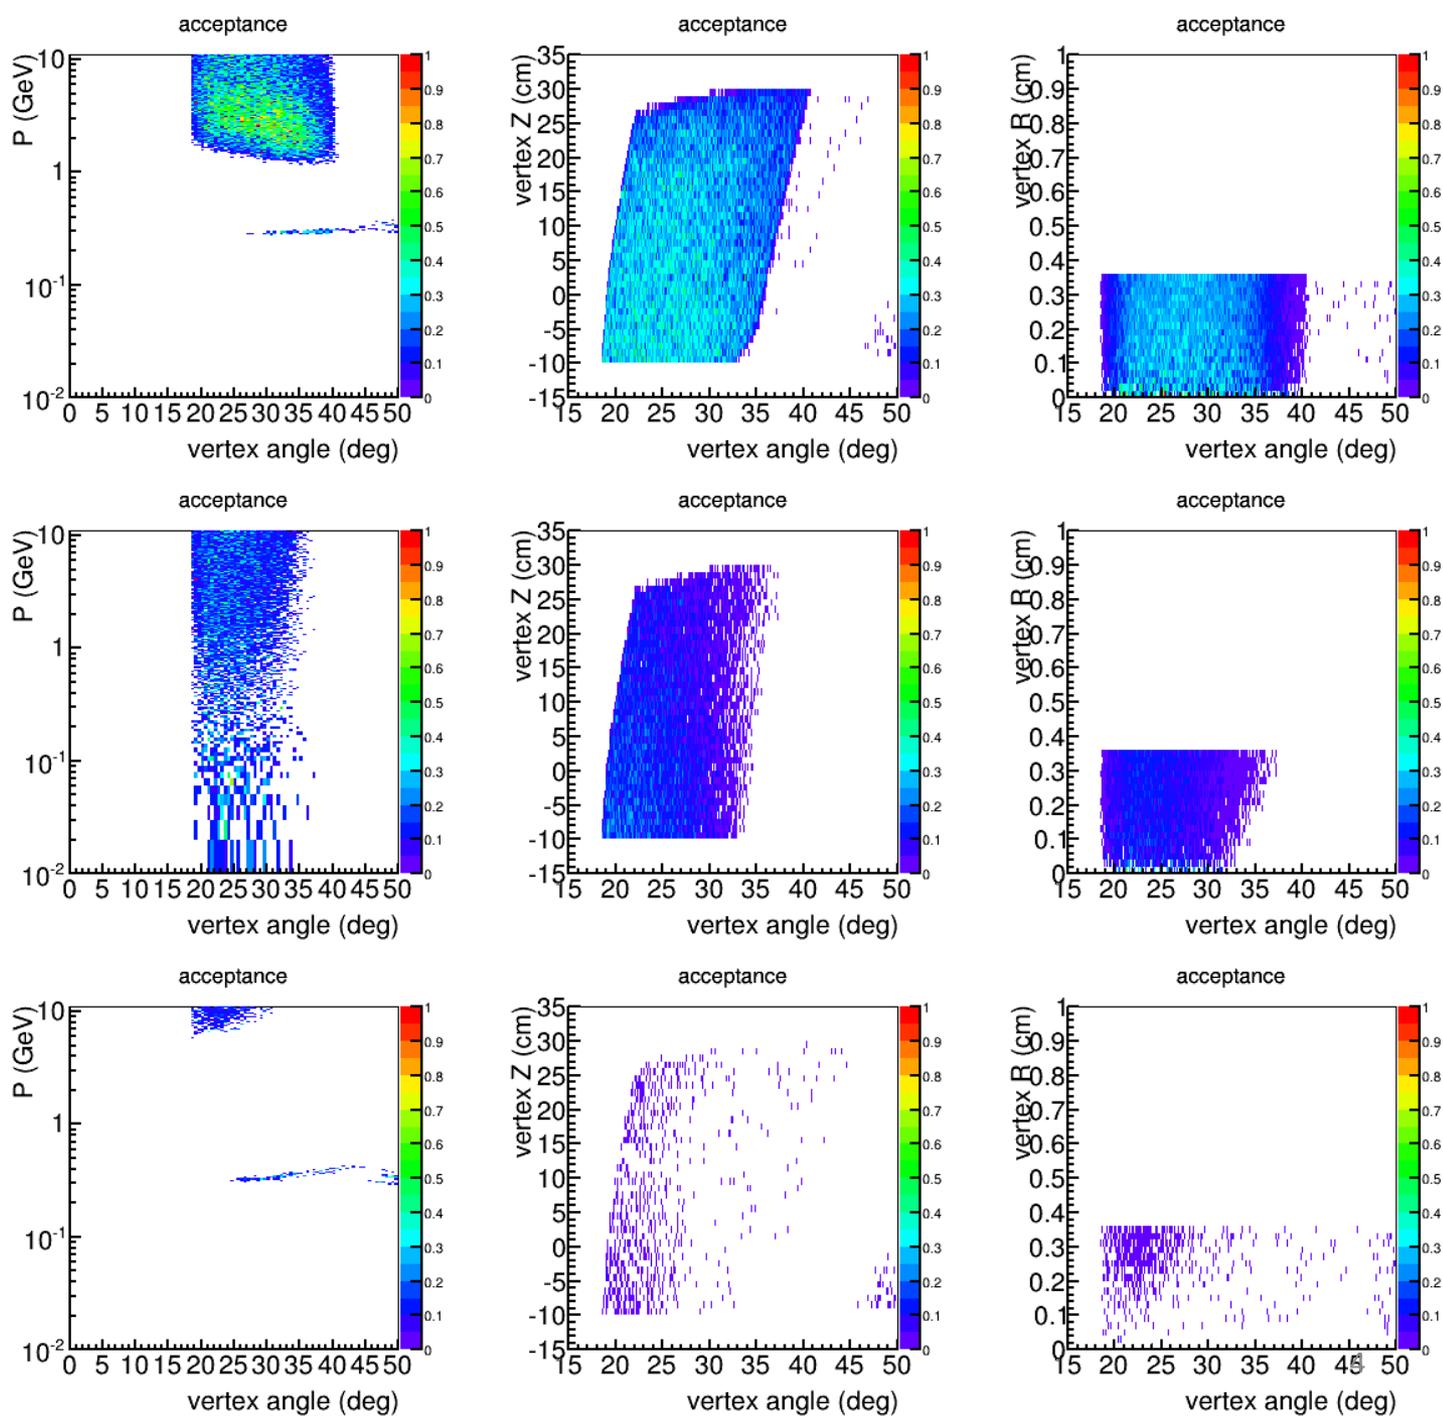

Acceptance,
BaBar baffle

EM photon Rate (GHz)

| EC | Full | | High | |
|--------------------|----------|---------|----------|---------|
| | E>~10KeV | E>10MeV | E>~10KeV | E>10MeV |
| BaBar baffle | 5.71e2 | 5.63 | 4.46e2 | 2.82 |
| BaBar baffle more | 5.04e2 | 4.70 | 4.20e2 | 2.82 |
| BaBar baffle more1 | 2.51e2 | 1.56 | 1.98e2 | 0.94 |
| CLEO baffle 4cm | 5.15e2 | 10.6 | 3.07e2 | 8.12 |

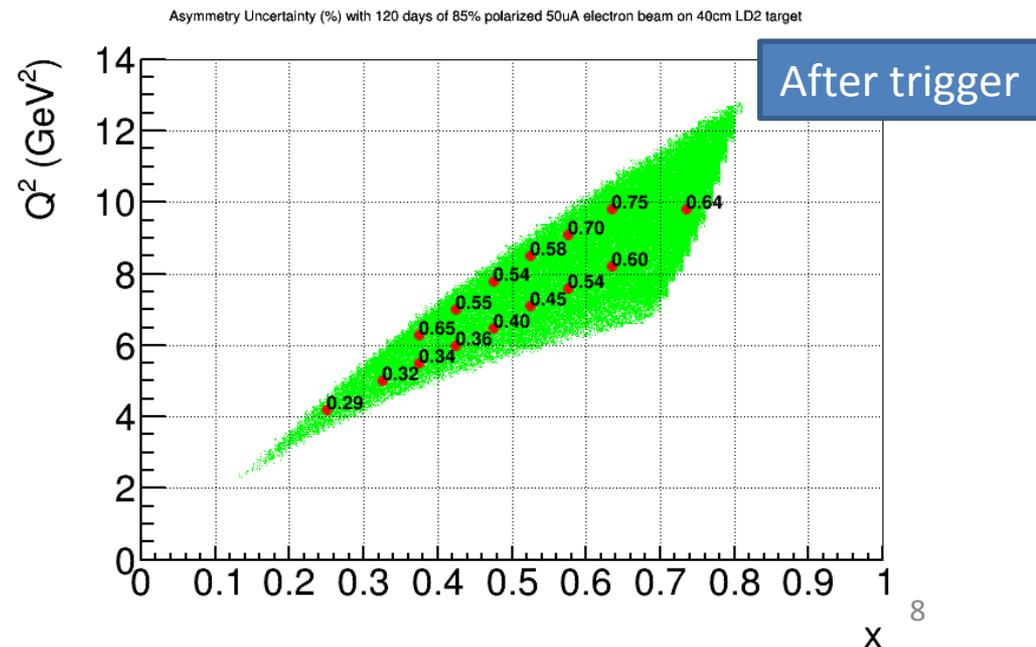

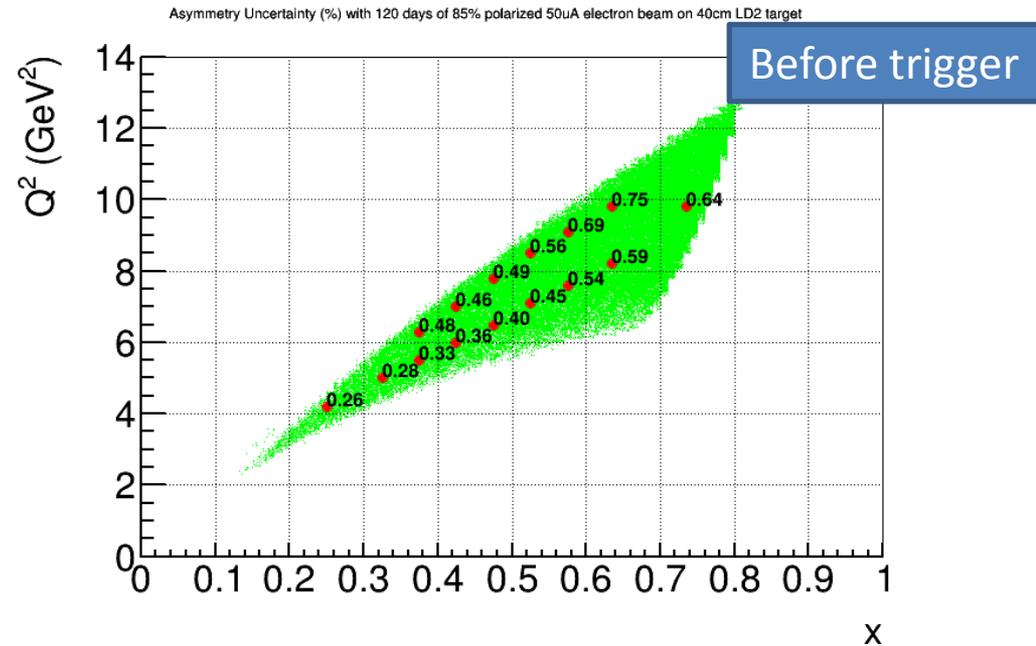

| Cherenkov | Full | | High | |
|--------------------|----------|---------|----------|---------|
| | E>~10KeV | E>10MeV | E>~10KeV | E>10MeV |
| BaBar baffle | 6.49e2 | 5.61 | 5.27e2 | 3.42 |
| BaBar baffle more | 5.82e2 | 5.31 | 4.95e2 | 3.13 |
| BaBar baffle more1 | 2.99e2 | 1.86 | 2.40e2 | 1.86 |
| CLEO baffle 4cm | 6.26e2 | 10.5 | 3.65e2 | 7.44 |

Rate has distribution over phi angle every 12 degree, we take 0-6 degree as high rate area and 6-12 degree as low rate area. The full rate area include both

Result with E>10MeV cut is limited in statistics

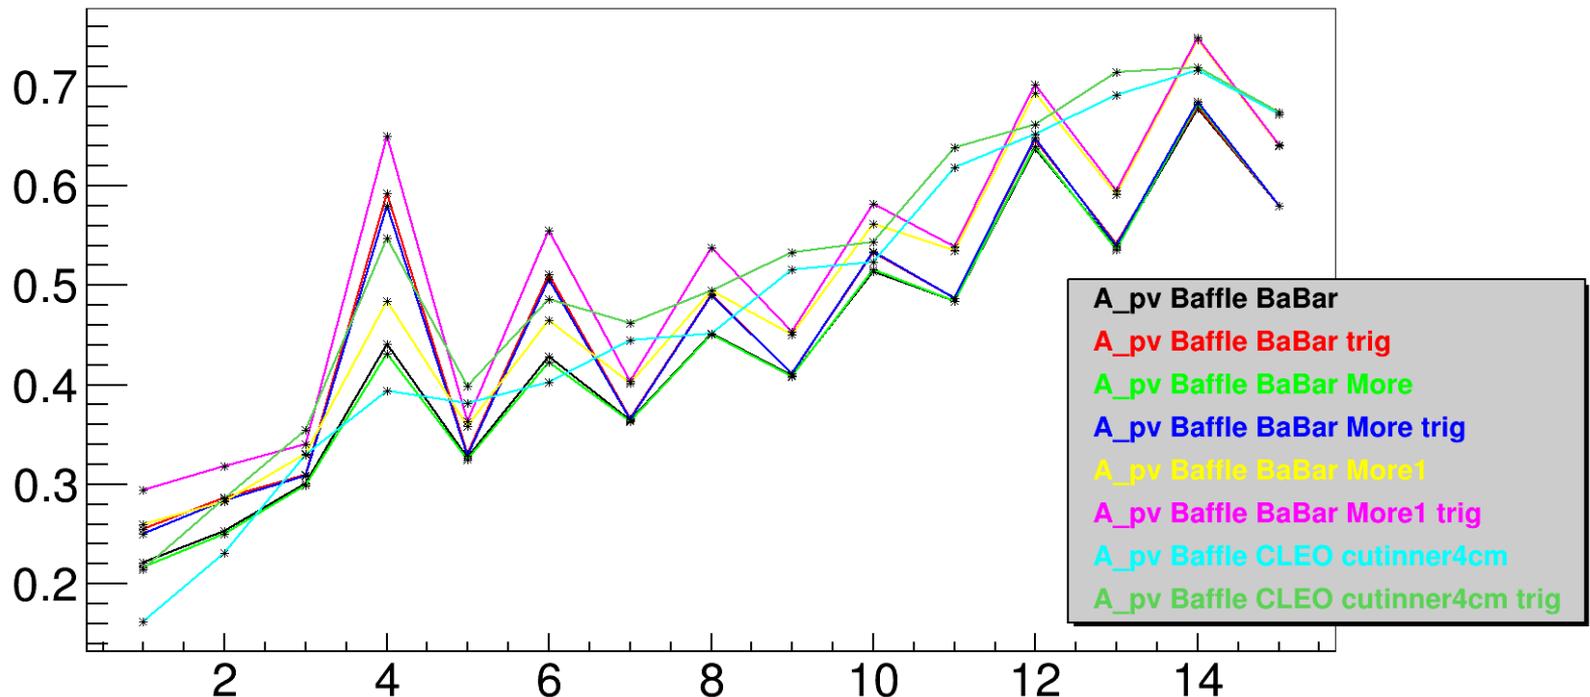

Err_Apv(%)

- “BaBar baffle more1”
- Before and after trigger
- 15 points in Q2,x plane

Err_Apv(%)

- 15 points in Q2,x plane, x and Q2 increase from low to high in X-axis
- Including untrig and trig result, the cut mainly affect things at lower x and Q2
- “CLEO baffle 4cm” is worse, “BaBar baffle” and “BaBar baffle more” are similar, “BaBar baffle more1” is inbetween

How to read the rate table on next two slides

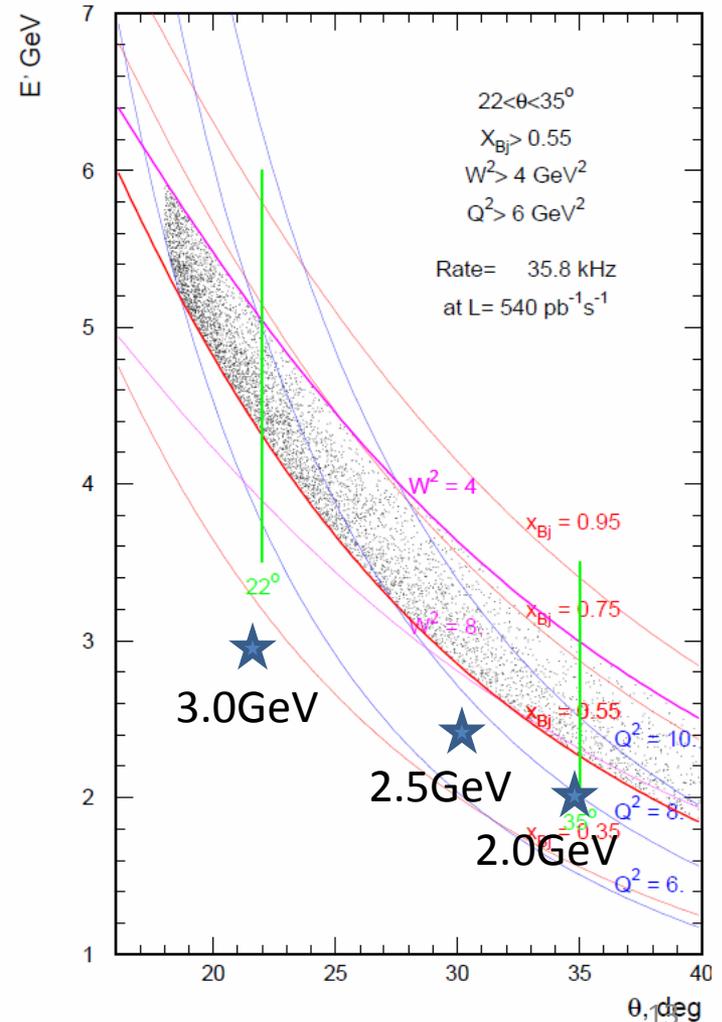

- All rate are in kHz
- All rate on whole EC plane, divide by 30 to get sector rate
- Top section is without trig cut, bottom section is with trig cut
- Rate has distribution over phi angle every 12 degree, we take 0-6 degree as high rate area and 6-12 degree as low rate area. The full rate area include both
- The last row of total rate with * has additional 5% eff cut on gamma from pi0
- The difference between the two tables are “more” and “more1” baffle

Trigger Rate Summary

- Max DAQ rate 65kHz per section
- We need at most 21MHz EC trigger rate, refer to $(21e6/30)*3e6*30e-9=63kHz$
- EC trigger rate (pion+gamma) for “BaBar baffle more1)
 - 53MHz with lead baffle
 - 23MHz with lead baffle if assume scintalor plane can give 5% rejection on photon from pi0
- (p trigger is not right, ignore it for now)
- PVDIS EC Trigger Turn-on curve based on Kryptonite “CLEO baffle 4cm”

PVDIS EC Trigger Turn-on curve based on Kryptonite “CLEO baffle 4cm”
